Diameter at Breast Height, or DBH, is the standard for measuring trees. DBH refers to the tree diameter measured at 4.5 feet above the ground. The Village loans out "D-Tapes" (Diamenter Tapes) that can be used to measure DBH. Alternatively, DBH can be measured as follows using a string, a measuring tape, a thumb tack and a calculator:

- 1. With the measuring tape, measure 4.5 feet up the trunk of the tree from the ground.
- 2. Use a thumb tack to mark the height on the tree.
- 3. Wrap your string around the tree trunk at 4.5 feet. Make sure the string is straight and tight around the trunk, and mark the circumference on the string.
- 4. Measure the length of string to get the circumference of the tree.
- 5. Convert the circumference measurement to diameter (DBH) by dividing the circumference by 3.14 (pi).

EXAMPLE: Circumference = 40 Inches 40 / 3.14 = 12'' DBH
