Project Address:

Project Type: Solar PV Installation

RE: Written Response to the Village of Orland Park Requirements for Solar Installation at

The electric equipment will be screened from view from streets, public rights-of-way, and adjacent properties. The meter is located on the back exterior of the household. It is hidden by a nearby bush and the yard is surrounded by a fence and other landscaping. The inverter and AC disconnect will be located near the ground (2-3 feet) next to the meter, per the homeowner's request. Pictures attached below showing this location.

The DC wire on the roof will be run through the attic. Depending on the structure of the attic, the rest of the DC wire run will come out either the wall or the soffit above the meter. This conduit will be painted to match the color of the brick as much as possible. This is all located in the back of the residence and will not be an eyesore.
